

# What Type of .308 Do I Have?

.308 rifles come in 3 main varieties: Armalite (AR10), DPMS LP, and DPMS HP. To determine which type you have, please follow this simple 2 step process. The only tool you need is a tape measure.

## Step 1

### Determine .308 “pattern”

DPMS vs Armalite AR10

This can be determined by the angle of the upper receiver. If it's Armalite, you're done!

DPMS Pattern  
Rounded Upper

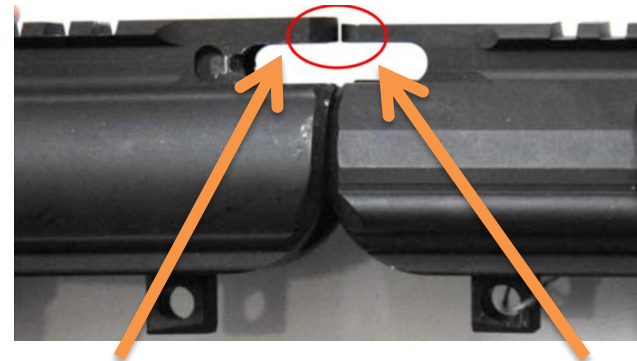

VS

Armalite Pattern  
Angled Upper

## Step 2

### Determine DPMS HP vs LP

Measure the thickness of the tab above the upper receiver.

DPMS HP  
3/16" Thick

VS

DPMS LP  
1/8" Thick
